Create a static web application portfolio that contains the following (for each member):

- Prelim HOA
- Midterm HOA
- Finals HOA
- Prelim Exam
- Midterm Exam
- Final Exam
- Reflection and Learnings

After creating the web application, create a docker file that will be built into a docker image use **Ansible** to build the docker file into docker images it will be deployed in 1 CentOS VMs as well as 2 Ubuntu VMs.

With your creation of a docker image using an ansible playbook, create another playbook that will run the said docker images.

So all in all you are required to create:

1. Web App

2. Docker file

3. Ansible playbook for creating the docker image using Ansible

4. Ansible Playbook for running the docker images into running containers.

You are graded based on how you used:

- Ansible
- Docker

You are not graded on the Web app itself, you don't have to deploy the web app to the internet itself.

Your Document should have the following:

- I. Title Page
- II. Table of Contents
- III. Development of the web application
- IV. Development of Ansible playbook as well as proofs
- V. Docker Containerization
- VI. Proof of Collaboration
- VII. Video Explaining the whole process of deployment (Should not be more than 7 minutes)
- VIII. Link to your Video (Youtube Video, Unlisted)

- IX. (For each Individual Member) Explain what is your contribution, provide screenshots.

Each member should submit their:

- Final Project Document(in PDF)
- What they contributed to the Project (Ansible File? Web app? Docker? Provide Screenshots of Proof and explain what you did in GREAT detail.)
